GreenRoad

Product Release Notes

Dear GreenRoad Customer,

We are excited to announce the latest GreenRoad release and to introduce the new features we've added to the GreenRoad Drive™ app.

Our latest mobile release incorporates the following new features:

- **Ukrainian Support**
- **Central Permissions – New Functionality**

Ukrainian Support

Ukrainian has now been added to the long and growing list of languages supported by the Drive™ App. Once Ukranian is selected as the App language, all text and audio alerts are provided in Ukranian.

How to set up a new language in the app?

When a driver logs in to the Drive™ App for the first time, the language used will be the one set up in the device's language preferences (Settings > Region & Language). If the App does not support that language, it will use English as a default.

A list of the available languages supported by the App can be found under the Settings tab. Select the relevant language based on your preference.

Click here to learn more about Localization options under the Settings tab.

Central Permissions – New Functionality

We are excited to introduce the latest functionality added to Central™'s permissions mechanism!

This new functionality gives managers more flexibility in configuring permissions, and includes the following new capabilities:

1. Restricting the ability to add\remove permission to\from users
2. Restricting access to the sensitive "Locations" tab
3. Providing more granular level of restrictions for users, vehicles, and trip management

No permissions are removed automatically from any existing user.

The only immediate impact of this change is that any manager who is not part of the root OU will no longer be able to grant permissions to themselves or others.
