

Product Release Notes

Dear GreenRoad Customer,

We are excited to announce the latest GreenRoad release and to introduce the new features we've added to the GreenRoad Drive™ app.

Our latest mobile release incorporates the following new features:

- **Easier identification of top-performing drivers: enhanced Leaderboard view**
- **Optimized low battery notifications: single alert at 15%**
- **Updated app store screenshots**

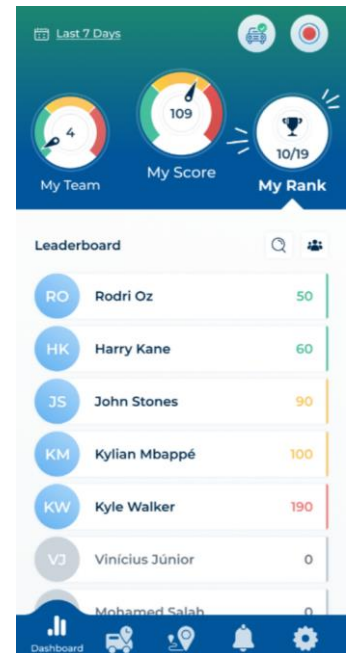

Easier identification of top-performing drivers: enhanced Leaderboard view

Managers can now easily identify their top drivers at a glance, thanks to a revamped Leaderboard view. The list is now ordered from the best drivers to most challenged, based on their Safety Scores.

The top drivers are prioritized at the very top of the list.

Gray drivers (drivers with no trips on record for the past week) will be located at the bottom of the list.

The new order of the list makes it easier to recognize and reward outstanding performance.

Optimized Low Battery Notifications: Single Alert at 15%

We've refined the logic behind low battery notifications to ensure that you receive alerts in time to respond effectively, helping you keep your app running smoothly without interruptions.

We have now set the system to give you a single alert (sound and text) when the battery reaches 15% charge.

Please note that the minimum battery level required to enable trip recording is 11%, unless the device is connected to a charger.

Updated App Store Screenshots

We've updated the screenshots displayed in the app stores to reflect the recent design changes that we've made within the app. Our goal is to provide an accurate and consistent visual representation of the user experience.

Thank you for choosing GreenRoad!

We look forward to supporting your journey towards safer and more efficient driving.
