

What's New in the New Drive™ App?

January 2024

New Drive™ App

We're super excited to introduce you to the new, revamped version of our Drive™ app, another step forward in our mission to improve fleet safety and to promote lasting change in your employees' driving habits.

The new Drive™ is the same, only better: Think of it as an “evolution” rather than a “revolution”.

It's more user-friendly than ever, with a cleaner “look” and a more streamlined design. It's even more driver-focused, with driver scores and rankings placed front and center for your drivers, and easier-to-see management KPIs and safety trends.

And here's a spoiler alert: you can expect to see additional exciting improvements in the next few months.

Same App Only Better

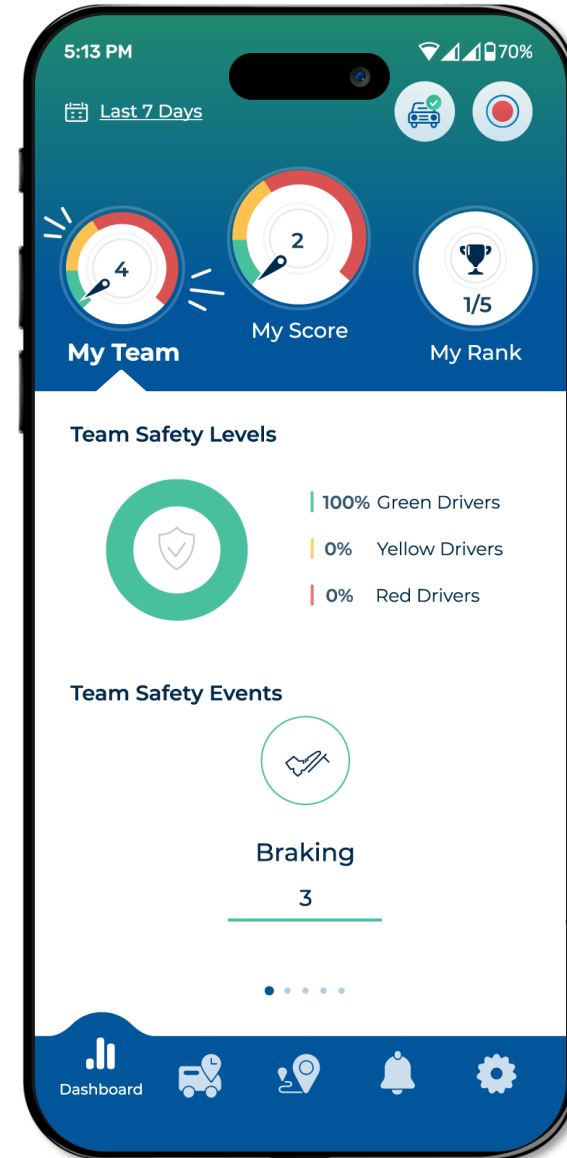

What hasn't changed are the app's basics:

- The accuracy of its real-time coaching and alerts
- Its ability to work in the background alongside other apps (e.g. Waze)
- Its easy-to-understand Safety Scores and Leaderboards
- Its flexible support for GDPR and other privacy policies.

New and Improved Features: Dashboard

Your dashboard is now front and center.

We've put your **main KPI indicators**, including the app's **My Team**, **My Score** and **My Rank** widgets, right up front to make it easier for you to track them.

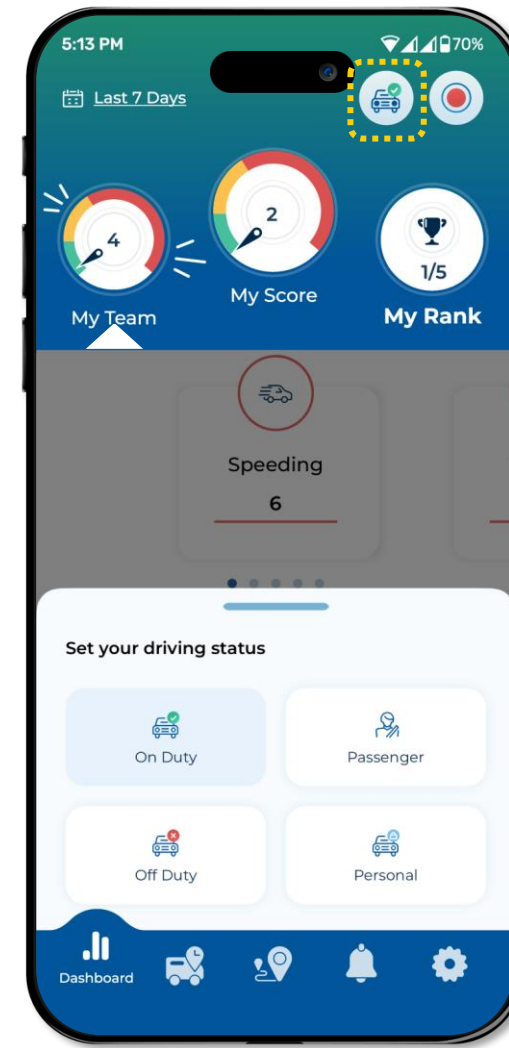

New and Improved Features: Duty Mode

We've moved the Duty Mode setting button to the Dashboard to make it easier to find and use.

To change the Duty Status, drivers just tap on the "car" button, and select On Duty, Personal, Passenger or Off Duty.

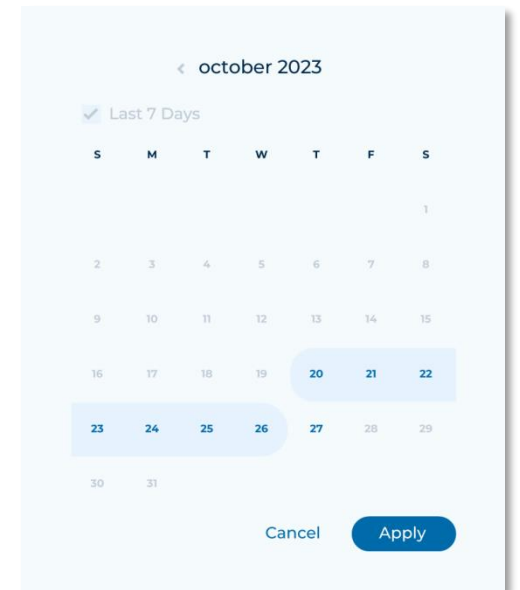

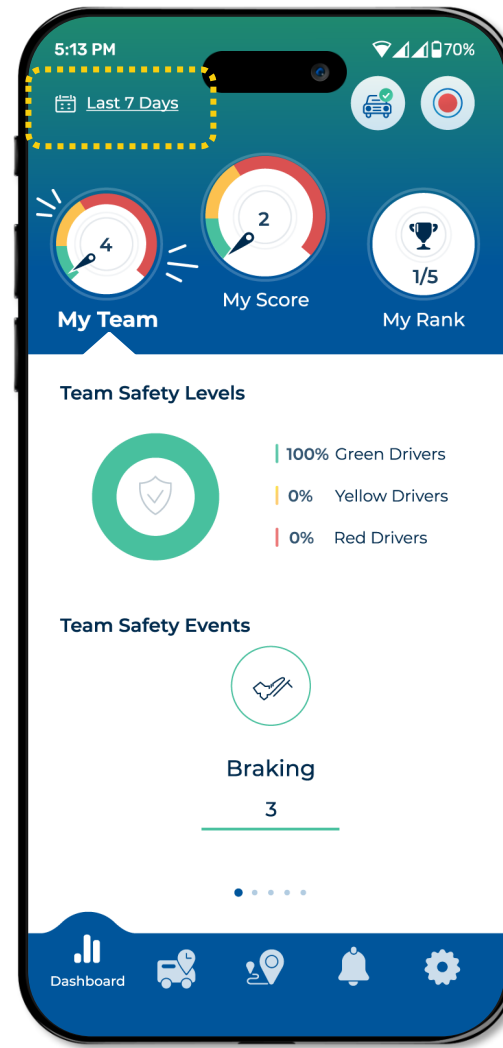

If their work schedule follows a regular pattern, they can use the On Duty Schedule button to swap automatically between On Duty and Personal and back again at the same times each day.

New and Improved Features: Date Range/Calendar Button

We've made it easier for you to set the date range for the data displayed.

Data displayed on the Dashboard is always for 7-day periods. Clicking on the Calendar icon lets you select any 7-day period within the last 3 months.

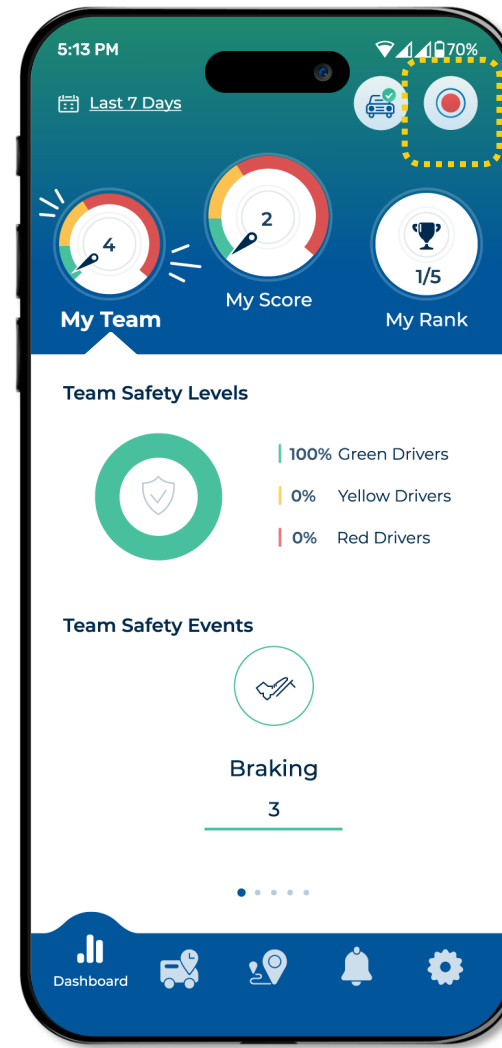

New and Improved Features: Manual Trip Start Button

We've added a new Manual Trip Start button to the Dashboard.

In general, the Drive™ app starts a new trip automatically when the vehicle starts moving.

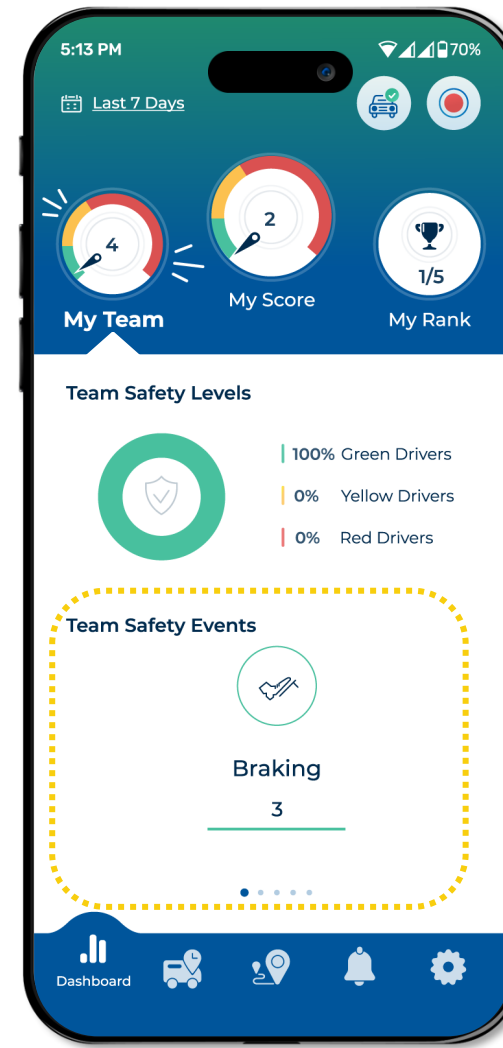

But if you want a trip to start even before the vehicle is moving - or to start a new trip manually for any reason - you can use this button.

New and Improved Features: Display of Safety Event Stats

We now display the “category cards” for each type of Safety Event horizontally, in order according to their severity.

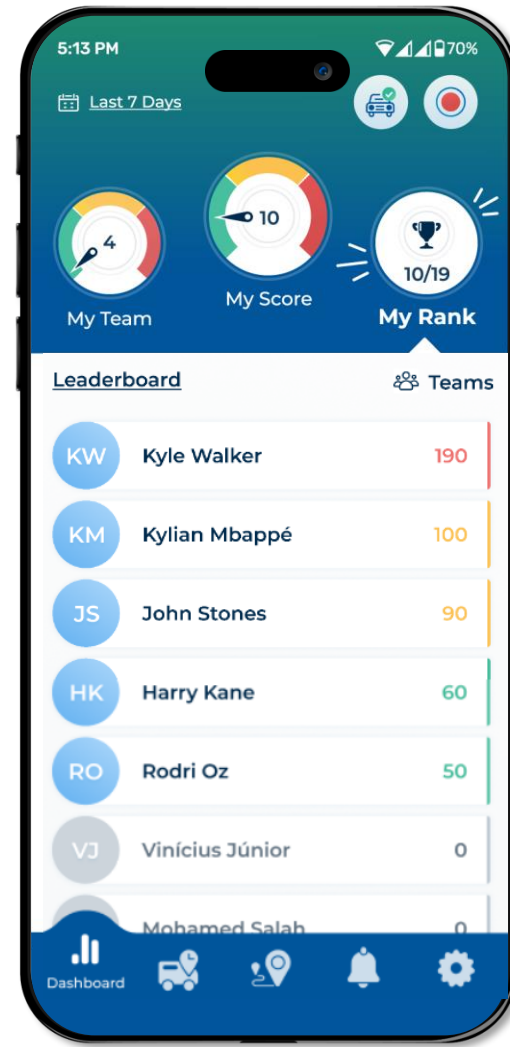

Just swipe to the right to cycle through them. The number inside the circle represents how many safety events were recorded for this category during the period, and the color shows its risk level during the period (e.g. green, yellow or red).

New and Improved Features: Leaderboard

Last but not least, **we've given you one-click access to the Leaderboard.** This is a list of all your team members in order by Safety Score.

Clicking on the Dashboard's My Rank or My Team Rank KPI displays it immediately.

Drive™ Your Safety to The Next Level

We hope these changes make your safety management even more efficient and impactful!

Please don't hesitate to contact us with any questions or requests. We pledge to keep improving the Drive™ app and the GreenRoad Platform to support your fleet's evolving safety and sustainability needs.
