

What's New in the New Drive™ App?

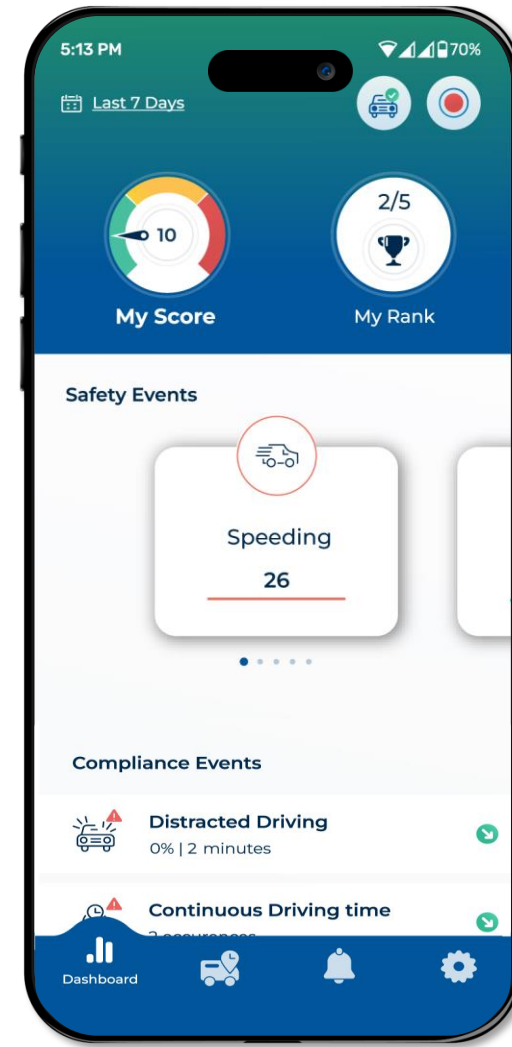

January 2024

New Drive™ App

We're super excited to introduce you to the new, revamped version of your Drive™ app, with innovations that will help you stay safe on the road, every minute that you're behind the wheel.

The new Drive™ is the same, only better: it's got a cleaner "look", and it's even easier to use. Your Safety Score and Rank are front and center on the Dashboard – and that's also where you'll set your Duty Status and the timeframe for the stats displayed.

Same App Only Better

What hasn't changed are the app's basics.

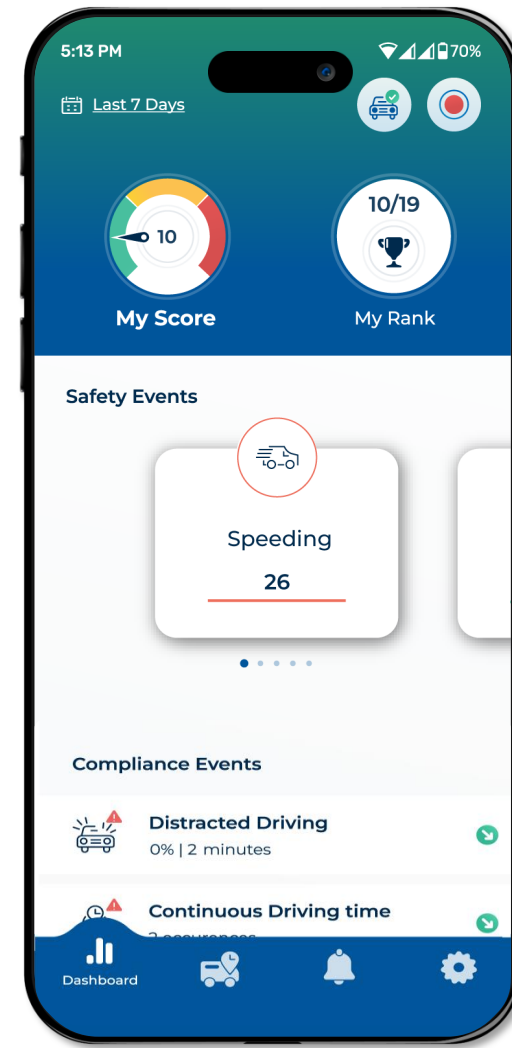

You'll still get super accurate real-time coaching and feedback, alerts when you near a hotspot, and real-time notifications.

The app still starts and ends trips automatically for you and works in the background alongside your Waze or company apps. Your Safety Score is calculated in the same manner, and there are still four Duty Modes that you can use to protect your privacy.

New and Improved Features: Dashboard

Your dashboard is now front and center.

We've put your **My Score** and **My Rank** charts right up front to make it easier for you to track your progress.

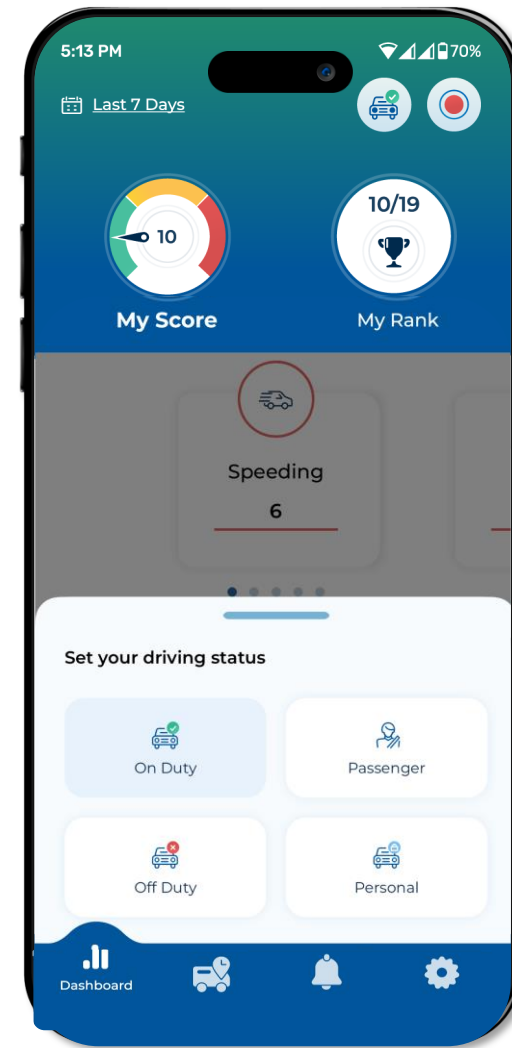

New and Improved Features: Duty Mode

We've moved the Duty Mode setting button to the Dashboard to make it easier to use.

To change your Duty Status, just tap on the "car" button, and select On Duty, Personal, Passenger or Off Duty.

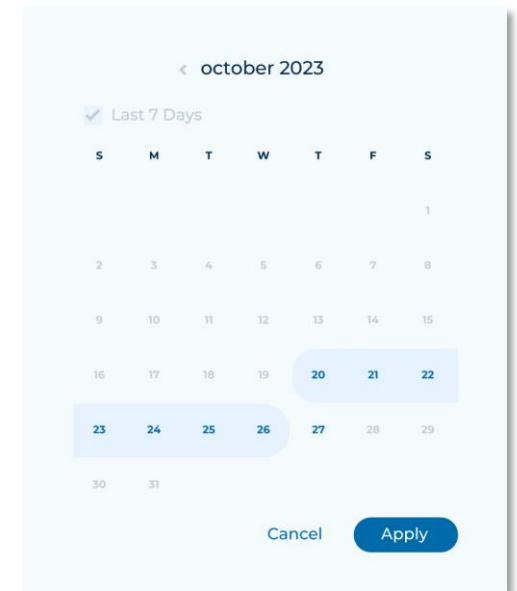

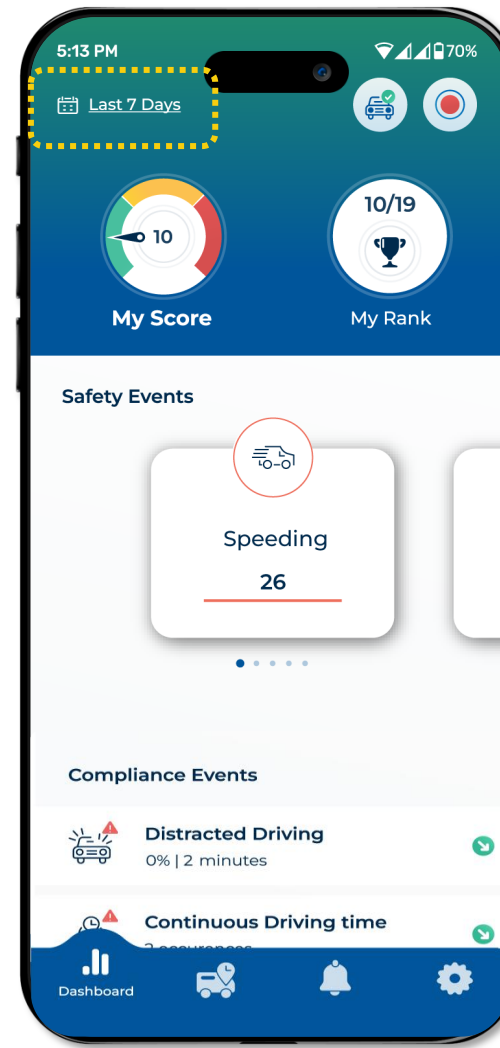

If your work schedule follows a regular pattern, you can use the On Duty Schedule button to swap automatically between On Duty and Personal - and back again - at the same times each day.

New and Improved Features: Date Range/Calendar Button

We've made it easier for you to set the date range for the data displayed.

Stats on the Dashboard are always for 7-day periods. Clicking on the Calendar icon lets you select any 7-day period within the last 3 months.

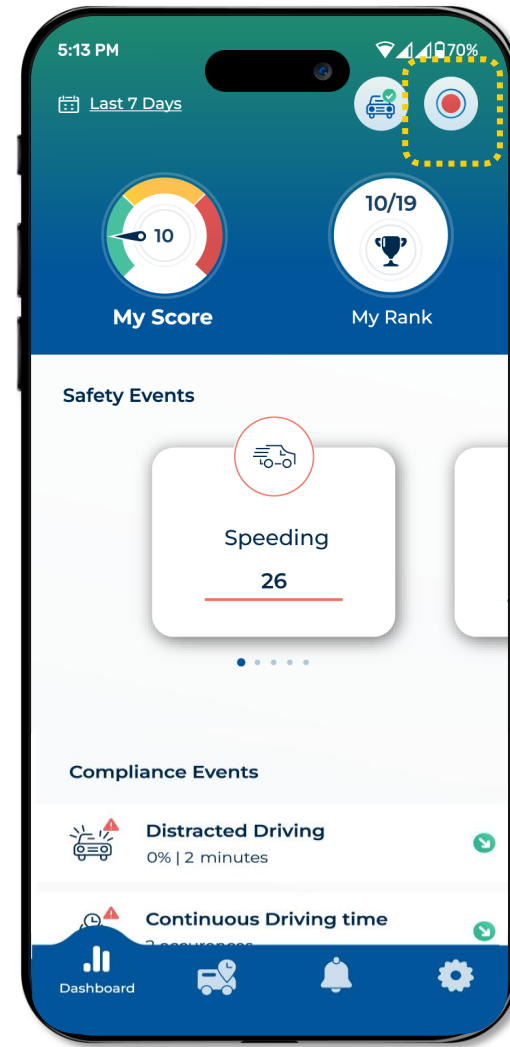

New and Improved Features: Manual Trip Start Button

We've added a new Manual Trip Start button to the Dashboard.

In general, the Drive™ app starts a new trip automatically when the vehicle starts moving.

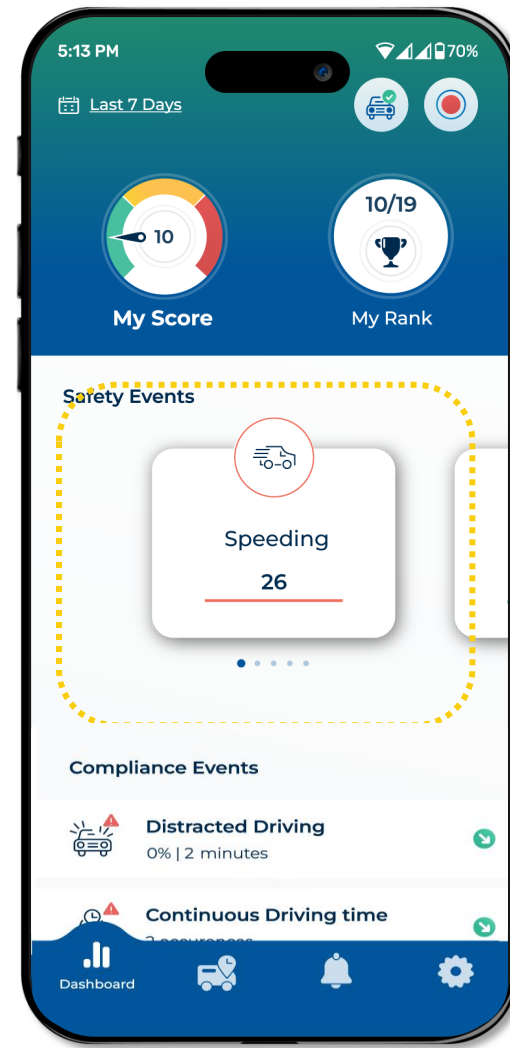

But if you want a trip to start even before the vehicle is moving - or to start a new trip manually for any reason - you can use this button.

New and Improved Features: Display of Safety Event Stats

We now display the “category cards” for each type of Safety Event horizontally, in order according to their severity.

Just swipe to the right to cycle through them. The number inside the circle represents how many safety events were recorded for this category during the period, and the color shows its risk level during the period (e.g. green, yellow or red).

Drive™ Your Safety to The Next Level

We hope these changes help you take your driving safety to the next level, keeping you safe and energy-efficient. Please don't hesitate to contact us with any questions or requests. We pledge to keep improving the Drive™ app and the GreenRoad Platform to support you.
